Clear communication right out of the gate

The 3M™ PELTOR™ WS™ Adapter G3, Ground Mechanic, combined with a PELTOR™ WS™ enabled headset, creates a seamless wireless link between the pilot and ground crew during pushback operations. Say goodbye to tangled cables and the risk of trips and falls. Our wireless connection can help provide a safer working environment during critical aircraft movements.

Safety is our top priority, which is why our headset not only provides clear communication but also offers hearing protection with auditory environmental listening capabilities.

3M™ PELTOR™ WS™ Adapter G3 Features

Design

Our newly designed IP54 rated casing ensures durability and ease of use. With a 2-button operation, voice guide, and clear LED status indication, our product is user-friendly and intuitive.

Battery

The rechargeable battery pack, with a capacity of up to 190 hours of continuous operation, eliminates the need for disposable batteries and contributes to a more sustainable solution.

Sound

We have enhanced sound quality with wideband audio, providing a more natural sound and better perception in noisy environments. Lower latency and improved duplex function ensure optimal performance. Our new voice guide alerts the pilot if the ground crew loses connection with the aircraft, enhancing safety and communication reliability.

Safety

Safety is paramount, and the WS™ Adapter G3 incorporates a newly designed safety hook attached via a double looped nylon strap. This feature adds extra security, reducing the risk of the adapter falling off the aircraft body and resulting in lost communication.

Connection & Cables

The adapter's connecting cable boasts a newly developed connector strain relief with an enlarged grip area, ensuring easy disconnection even when wearing winter gloves. The extended cable length accommodates wide-body aircraft, providing flexibility in various attachment points.

3M™ PELTOR™ continues to lead the industry with innovative solutions that prioritize safety, reliability, and ease of use. The WS™ Adapter G3 sets a new standard for wireless communication in aircraft pushback operations, empowering ground mechanics with a secure and efficient connection.

Despite its advanced features, the WS™ Adapter G3 remains lightweight and compact, fitting easily into a pocket when not in use. It is compatible with 3M™ PELTOR™ WS™ enabled headsets, including the WS™ ProTac XPI and WS™ LiteCom Pro III, ensuring seamless integration with existing equipment.
